

I oppose the NOI concerning Broadband Over Power Line (BPL). The threat of interference to the Amateur, Marine and other services is far too great. No where is there proof of need for such a service, and if so it is far too small for the RF interference risk to other services in the spectrum it utilizes. Also, no where is it shown to provide any value to consumers or investors in this technology. There are many other viable broadband services available in this country, this is not one of them, and should be dismissed from any further consideration.
